## Statement of Significance

Last updated on - November 1, 2009

Statement of Significance as recorded under the Queenscliff Heritage Study 2009

*Navestock* is of high local historical significance as Queenscliff's first Mechanics Institute, as the site of the township's first Methodist Church services and as an early surviving building in Queenscliff. The building's original semi-public function is suggested by its high walls and low pitched hipped roof. *Navestock* is also of significance as a good and intact example of a modest mid-Victorian weatherboard residence. The picket fence is of an early pattern and may be of early origins.[i] *Navestock* is also of historical significance for its long association with the Priddles, a prominent local Queenscliff family.

## Physical Description 1

## Statement of Significance as recorded under the Queenscliff Urban Conservation Study 1982

'Navestock' was purchased by the Priddles, a concave roof verandah and a window were added to the building facade. Cast iron friezes and brackets adorned simple stop-chamfered, timber posts.<sup>(12)</sup> A new chimney was constructed on the northern side, and in the early twentieth century a kitchen wing was added to the rear.

The interior has fine mouldings on walls which are lined with vertical softwood boards, covered with hessian and paper. The ceilings are of fine-beaded softwood boarding with arbitrarily placed fretted timber vents therein. The reading room was in the southern front room and it communicates with a shelving recess in the passage wall, via a small window which has since been covered over.<sup>(13)</sup> A fine timber architrave follows the arch which once divided public from private in the passage.

## Physical Description 2

Extract from the 2009 study

*Navestock* is situated on the east side of Hesse Street, between King and Stokes Street. It is set back from the street boundary by a mature garden. A low timber picket fence with central gate extends along the street boundary this appears to be of early origins.

The principal elevation has a central front door flanked by a canted bay window at left and a double-hung sash window at right. A verandah with timber posts and a convex profile roof, with cast iron fretwork, extends across the Hesse Street elevation. The house has a hipped roof clad in corrugated galvanised steel sheeting. There is a rendered brick chimney with a Classically-inspired moulding at its top. A weatherboard addition is visible towards the rear of the side garden.

The interior (assessed in 1984) has fine mouldings on walls that are lined with vertical softwood boards, covered with Hessian and paper. The ceilings are of fine-beaded softwood boarding with arbitrarily placed fretted timber vents therein. The reading room was in the southern front room and it communicates with a shelving recess in the passage wall, via a small window that has since been covered over.<sup>[i]</sup> A fine timber architrave follows the arch that once divided public space from private space in the passage.
