## Statement of Significance

Last updated on -

B Listed - Regional Significance

### STATEMENT OF SIGNIFICANCE

The reinforced concrete ventilation stack at Black Rock is **historically** and **scientifically** significant at a REGIONAL level. It is associated with the Geelong Waterworks and Sewerage Trust's Ocean Outfall Scheme of 1911-15, designed and constructed by the engineers, Stone and Siddeley, using the Considere system. It also contributes to a wider understanding of Geelong's sewerage scheme from the 1910s.

Overall the ventilation stack at Black Rock is of REGIONAL significance.

It is highly recommended that a conservation management plan is carried out on the structure.

## Physical Description 1

This circular, reinforced concrete ventilation stack is approximately five metres high and around 800mm in diameter. It is characterised by a conical base and has both vertical and horizontal ribbing, forming rectangular patterns. A projecting capping supported by dentils form the top to the stack. Description

*This place/object may be included in the Victorian Heritage Register pursuant to the Heritage Act 2017. Check the Victorian Heritage Database, selecting 'Heritage Victoria' as the place source.*
