Statement of Significance

Last updated on -

The mature elm, Irish strawberry, pepper trees and silky oak at the Footscray Primary School 1912 are significant to the City of Maribyrnong:

- as mature specimens of their type in the City and, in the case of the elm, among the oldest in the City (Criterion B2);

- for their association over a long period with the development of landscape within this 19th century public reserve (Criterion A4).

Footscray Conservation Study SOS

Built in local basalt the school complex (1877-87) has been designed in a successful and picturesque Tudor revival manner seen at its best in schools in Footscray and Williamstown. It is also part of a valuable civic precinct which relies in part on the Medieval character basalt architecture.

Australian Heritage Commission (AHC) criteria

The Australian Heritage Commission criteria consist of a set of eight criteria which cover social, aesthetic, scientific, and historic values. Each criterion has sub-criteria written specifically for cultural or natural values. The relevant criteria are:

A.4 demonstrates well the course and pattern of history, important historic events

B.2 rarity

Physical Description 1

A large elm specimen located in the school reserve at the north east corner, next to an `Arbutus unedo' or Irish strawberry tree. There are also semi-mature pepper trees on the south boundary, along Bristow St, and a silky oak in the grounds at the rear of the stone wing.

The Ulmus genus of 20 or so species of trees and shrubs `occur naturally in temperate regions of the northern hemisphere. During the 1920s and 1930s, and again in the 1960s and 1970s, elm trees in Europe and North America were devastated by Dutch elm disease, caused by the fungus Ophiostoma ulmi, which is transmitted by the elm bark beetle. Except for a few East Asian species, they are deciduous, turning yellow in fall (autumn). The leaves are usually alternate, onesided at the base, with prominent, parallel, lateral veins and regularly toothed margins; the small, disc-like fruits have a membranous wing and are carried in clusters. Most elms are large limbed with furrowed grey bark and high, domed crowns { Botanica}.'

Physical Conditions

Good, partially disturbed, well preserved.

Integrity

Substantially intact/some intrusions.

Physical Description 2

Context

Set within a historic public building precinct, and perhaps the only tree of a comparable age with the early buildings is the elm.
