Statement of Significance

Last updated on - July 30, 2004

Contribution to historic park
Outstanding size

A fine specimen tree, *Corymbia ficifolia* is native to a very small area of south west coast of Western Australia (measured in just tens of kilometres), but is not considered under threat in the wild. The species is unusual in that it mainly grows only in spring, which means that the flower heads (which blossom in late summer) are outside the bulk of the foliage and very visible.

Tree surgery has been carried out in the past and the extensive canopy has been cabled

Measurements: 02/1983

Spread (m): 18.5

Girth (m): 3.4

Height (m): 19

Estimated Age (yrs): 100+

Condition: Good

Access: Unrestricted

Classified: 17/02/1983.
